Erin - here is the information that Steve sent to Megan. It would be great if we could build it out a bit more before the RA meeting next week. I've asked Cheryl to get with us tomorrow. Thoughts?

David

As a follow-up to our earlier discussion, OECA typically relies on a limited set of metrics for gauging Regional progress. The primary measures are the number of inspections we do and the number of formal enforcement actions we take [including estimates of timeliness and pollution reduced]. OECA does not measure the collective/combined successes of the Agency and the states, nor are there comprehensive measures of progress and/or success for most of the state-industry-partnerships/collaborations we and our state partners value.

Some examples of our existing collaborative efforts and potential progress/success measures are as follows:

1] Texas Association of Builders joint outreach and training partnership with the State of TX and Region 6:

- development of joint training material;
- number of homebuilders who took the online training;
- track the number of SWPPP permits issued in areas with water quality issues

2] The Louisiana Mid-Continent Oil and Gas Association joint outreach and training program with the State of LA and the Region:

- track the number of companies who participate in training on regulatory requirements;

- track the number of companies getting permits and or registering as generators of HW;

3] FLIR flyover of Permian Basin partnership with the State of Texas and Region 6s:

- number of companies participating in the State's self-audit program as a result of leak notifications;

4] Partnership with the Louisiana Department of Agriculture and Region 6 and area dairy farmers on developing sustainable business practices:

- number of farmers who participate in training events;
